GeoAgri AI

Smart Farming from Space

AI-Powered GIS & Remote Sensing for Crop-Health Monitoring

Monitor crop health from space — free satellite imagery, AI insight.

GeoAgri AI turns free Sentinel-2 satellite imagery and Google Earth Engine into simple, actionable crop-health insights. Farmers draw a field boundary, and the platform computes NDVI vegetation health, pulls live weather, and generates plain-language AI recommendations that always explain **why** — no remote-sensing expertise required.

The Problem

Field scouting is slow and reactive, and by the time crop stress is visible on the ground, yield is already lost. Commercial satellite analytics exist but are priced for large agribusiness — out of reach for smallholder and mid-size farmers.

Our Solution

An affordable SaaS platform built on **free** satellite data. Detect water stress, disease risk and vegetation decline early; get 48-hour action windows; export shareable reports — starting with a 14-day free trial and local payment options.

How It Works

1. Register & 14-day trial
2. Draw / upload farm boundary
3. Sentinel-2 NDVI analysis
4. Weather + AI interpretation
5. Dashboard, maps & reports

Key Features

- **NDVI crop-health monitoring**
  Sentinel-2, cloud-filtered & clipped to each field
- **Interactive maps & NDVI overlays**
  Leaflet satellite basemap with health heatmaps
- **Historical comparison**
  Track NDVI trend and catch decline early
- **14-day free trial + fair pricing**
  Starter $9.99 / Professional $29.99 per month
- **Explainable AI recommendations**
  Advice with the reasoning behind it, never a black box
- **Weather & 7-day forecast**
  Live conditions factored into every recommendation
- **PDF & CSV reports**
  Share results with agronomists and buyers
- **Local manual payments**
  JazzCash, EasyPaisa & bank transfer — no card needed

TECHNOLOGY

React · TypeScript · Node.js/Fastify · Python/FastAPI
Google Earth Engine · Sentinel-2 · Prisma · Docker

STATUS

Production-ready MVP — full auth, farms, satellite analysis, billing & admin. Verified end-to-end.

Target market: smallholder & commercial farmers, agri-cooperatives and agronomists — starting in Pakistan & South Asia.
